Back-end, PHP

STRENGTHS

PHP Bitrix complex bugs
business processes data import
optimization data migration
software development back-end

WORK EXPERIENCE

Back-End Developer 06/2018 – present
Notamedia, Moscow (remote), Russia

Project 1. Charity Corporate Portal

- Developed a corporate portal, the purpose of which was to organize a single workspace for company employees and to ensure the creation and distribution of tasks for performers for organizing charity events
- Participated in demonstrating the developed functionality to the client Participated in the discussion of testing the developed functionality

Project 2. Corporate portal of IT-Holding

2000 employees use the corporate portal

- Participated in the development of new functionality for the sections: Feedback, Social Network Groups, Applications, News, Telephone Directory, Calendar, Mailing List, Birthdays, Personal Account, Bulletin Board, Widgets, FAQ, Disk
- Improved integration with the MSSQL Mediator database, from which employees, departments and employee bindings to departments are imported
- Solved the following problems:
- Fixed incorrect import of some user data
- Optimized the import algorithm, resulting in reduced import time and reduced server RAM consumption
- Fixed a problem where duplicate user profiles appeared
- Conducted a refactoring of the module, making it more flexible, as a result of which it became possible to add new import scenarios in the

WORK EXPERIENCE

shortest possible time, which made it possible to quickly respond to changes in the structure of the Mediator

- Created handling extreme cases
- Fixed 17 complex bugs in various functional parts of the project
- Participated in demonstrating the implemented functionality to the client and discussing the further direction of development and improvement of the functionality
- Analyzed the terms of reference and discussed with the analyst problems and some implementation details
- Twice replaced the temporary missing Team Lead. In parallel, performed part of the duties of the replaced Team Lead and own duties. Issued tasks to two developers, assisted in their implementation, checked the result of execution
- Participated in the release of functionality
- Created 38 data migrations

Keywords: software development, optimization, data migration, demonstrating the developed functionality, integration with the MSSQL Mediator database, complex bugs, terms of reference

Back-End Developer 11/2016 – 06/2018
DigitalSpectr, Permian (remote), Russia
